⚗ Notable Projects

Recalls Dashboard @ https://github.com/jonathanhild/fdadashboard

End-to-end project to build data dashboard from US and International food recall sources. Uses natural language processing and machine learning to classify recall events. Provides useful information for analysis of emerging hazards.

Traceability System @ Oregon Spice Company

Scripts connected to ERP system to run traceability exercises. Improved traceability completion time by 16x and personnel by 3x.

Supplier Approval System @ Oregon Spice Company

Using Tracegains SaaS, created supplier approval program. Created program standards, KPIs and documentation.

Spec Database @ Oregon Spice Company

Built database-backed program to create, manage, and version specifications. Connect to company ERP using SQL and ODBC connectors.

ETL & SKU Generator @ Oregon Spice Company

ETL of 10+ years company data with Python scripting for new ERP system; automated process completed in 6 hours. Data model and Python scripting to generate 600+ item SKUs using raw material densities.

Statistical Analysis of Mozarella Line @ Lactalis American Group

ANOVA analysis to find sources of underweight finished products in mozzarella line. Created 1.5 year dataset and presented findings to plant operations team.
